SUMMARY

Computer Science graduate (B.Tech, CGPA 9.37/10) with hands-on experience applying **Python, SQL, machine learning and AI** to build data-driven applications and analytics solutions. Experienced in developing ML-powered products, processing structured and unstructured data, building analytics dashboards, and evaluating AI systems for quality and reliability. Strong interest in **data products, customer-focused problem solving, product-led innovation and financial markets**, with a foundation in data analytics, AI/ML and software development.

EDUCATION

Centurion University of Technology and Management **Odisha, India**
Bachelor of Technology - Computer Science and Engineering; ***CGPA : 9.37*** *Sept 2022 – Apr 2026*

SKILLS

Data & Analysis: Python, SQL, Pandas, NumPy, Scikit-learn, Data Analysis, Statistical Analysis
AI/ML Frameworks: Machine Learning, NLP, PyTorch, TensorFlow, spaCy, NLTK, LLMs, RAG, Prompt Engineering
Databases: PostgreSQL, MySQL, MongoDB, Vector Search, ChromaDB
Backend & APIs: Node.js, Flask, FastAPI, REST APIs
Cloud & Tools: AWS, Docker, Git, GitHub, CI/CD
Core Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Problem Solving

EXPERIENCE

Infosys Springboard **Dec 2025 - Feb 2026**
AI/ML Intern

- Built **EcoPackAI**, a full-stack ML-driven platform that recommends sustainable packaging based on product dimensions and category, achieving **97% model accuracy**.
- Developed predictive models for **carbon footprint and cost efficiency**; resulting recommendations **reduced simulated material cost by 22%**.
- Used **PostgreSQL** and **REST APIs** to support structured application data and backend services, with a focus on reliable data processing and scalable system design.
- Consolidated model insights into an **analytics dashboard** so packaging recommendations and their cost and sustainability impact could be reviewed in one place.

PROJECTS

Multimodal RAG-Based Chatbot Application | Github | Live *Python, FastAPI, ChromaDB, LangChain*

- Designed and built a **multimodal RAG** chatbot using **Python and FastAPI**, combining **BM25** keyword search with **semantic vector search** and **cross-encoder reranking** so the LLM receives the most relevant context and returns accurate, **citation-backed answers**.
- Applied **prompt engineering, citation enforcement** and **hallucination checks** to keep responses grounded in retrieved sources and improve information relevance and reliability through systematic evaluation.
- Created an **evaluation dataset of 30-50 questions** and set up **automated CI/CD testing** to monitor response quality, making the RAG pipeline measurable and repeatable to improve.

Automated Resume Parser & Analysis Tool | Github *Python, spaCy, NLTK, Pandas*

- Built a **NLP** based data-processing pipeline to parse unstructured resumes and extract key entities such as skills, work experience, and education, achieving over **85% extraction accuracy**.
- Engineered **rule-based** and **statistical text-cleaning** algorithms to normalize complex multi-format documents, **reducing downstream data-processing errors by 30%**, enabling structured data processing for data-driven recommendations and user decision-making.
- Implemented a skill-matching engine that paired parsed candidate profiles with web-scraped job listings, cutting manual **job-search effort by 40%** for end users.

ACHIEVEMENTS

- Surprise Winners at **State-Level Cyber Safety Hackathon 2025**, IIT Bhubaneswar.
- Secured 1st Position at **Agentic AI Hackathon**, CUTM
- Participated in **Campus Hackfest 2026**, O-Hub Bhubaneswar.
